Conservatory Designs Introduction

The wide range of conservatory designs, styles and configurations featured all utilise Ultraframe roofing systems. Ultraframe specialise in roofing systems and make thousands of roofs per year - over a quarter of a million in the last 10 years alone. With an Ultraframe roofed conservatory you know you're in safe hands.

Ultraframe roofing systems have been tested by the government backed approvals body, the British Board of Agrément. For building products this is the most demanding and rigorous testing regime anywhere in Europe. The BBA stated that Ultraframe roofs have a *"life expectancy of at least 25 years."*

The CAD drawings and photographs can only illustrate a narrow cross section of the styles and specifications that it is possible to design. Dwarf wall in brick, stone or render, full height frames, tilt and turn or top lights, leaded or unlead, polycarbonate or glass roof, white or woodgrain - the list of combinations and permutations is virtually endless.

Safe in the knowledge

Manufactured from a portfolio of 3500 components covered by over 80 worldwide patents, giving you a conservatory to suit your house and budget.

- Manufactured using the latest developments in design and high tech materials.
- Our roofs are the only ones in the UK that have been tested and approved by the BBA, the government backed approvals body who gave each roof *"a life expectancy of at least 25 years"*.
- Ventilation is critical especially at the ridge, the hottest part of the conservatory. Working with our standard patented trickle ventilation in the ridge is Ridgeflow, a patented mechanically assisted ridge ventilation unit which is exclusively available. It's thermostatically controlled, averaging 4 air changes per hour and working whether you're in or out, night or day and with no compromise of security.

Conservatory Designs **Three facet Victorian**

The 3 facet style is a classical Victorian conservatory. Its versatility and pleasing aesthetics make it suitable for almost all applications.

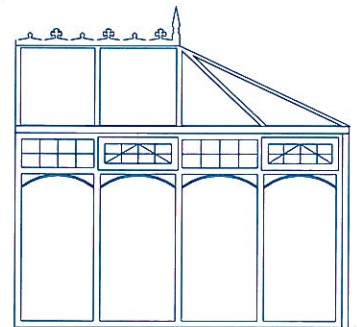

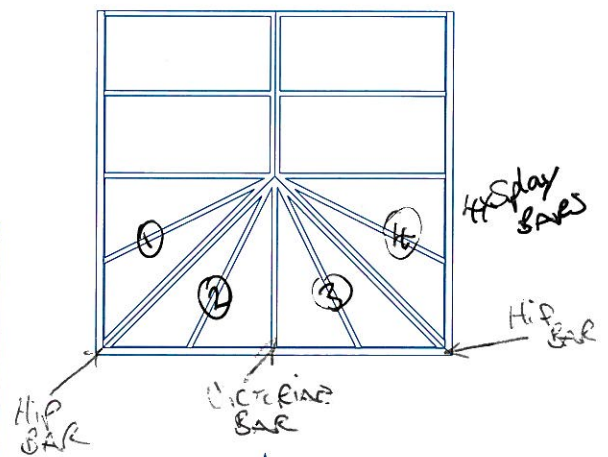

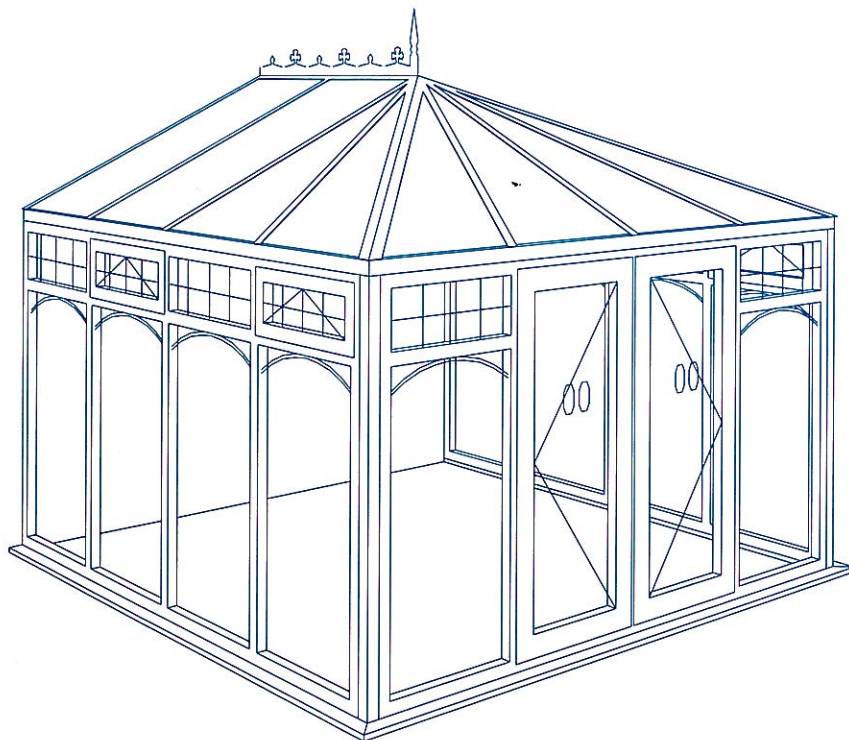

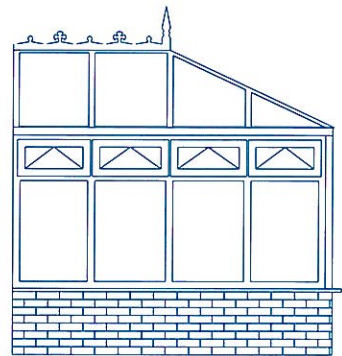

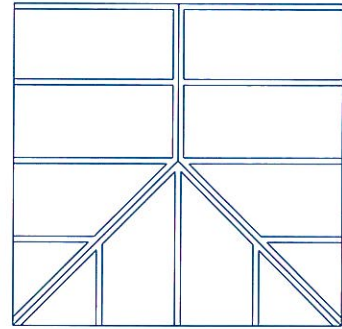

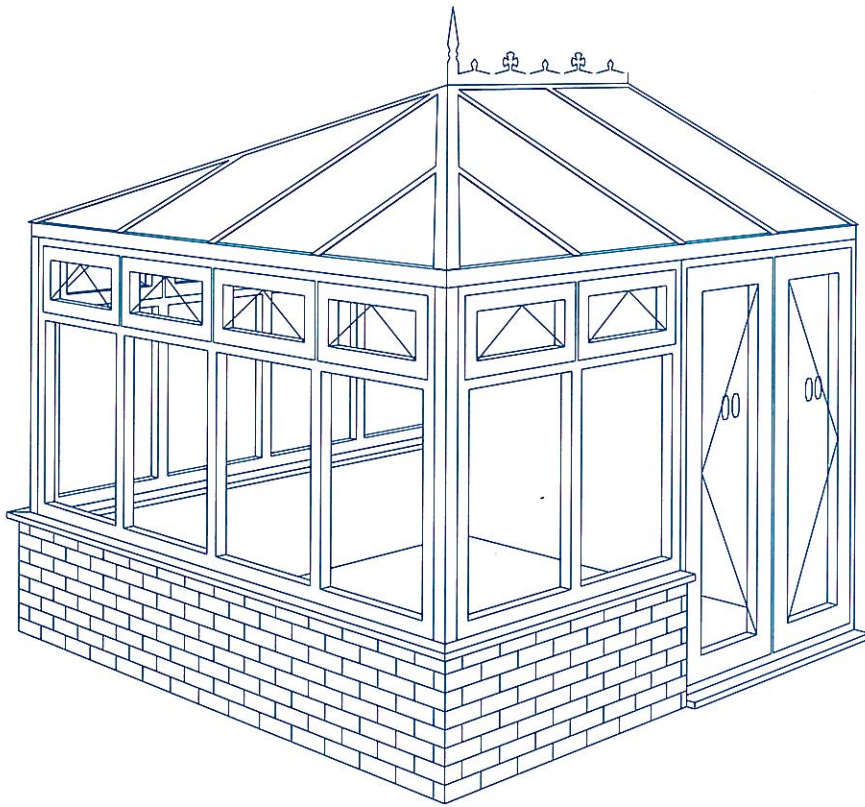

Conservatory Designs **Five facet Victorian**

Similar to the 3 facet Victorian, this 5 faceted conservatory hints at a subtle rounded appearance. It offers the ideal blend of space and appearance.

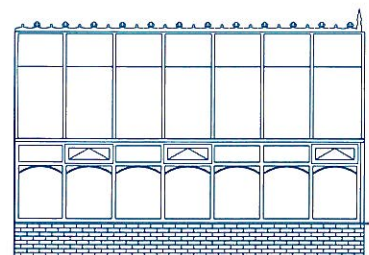

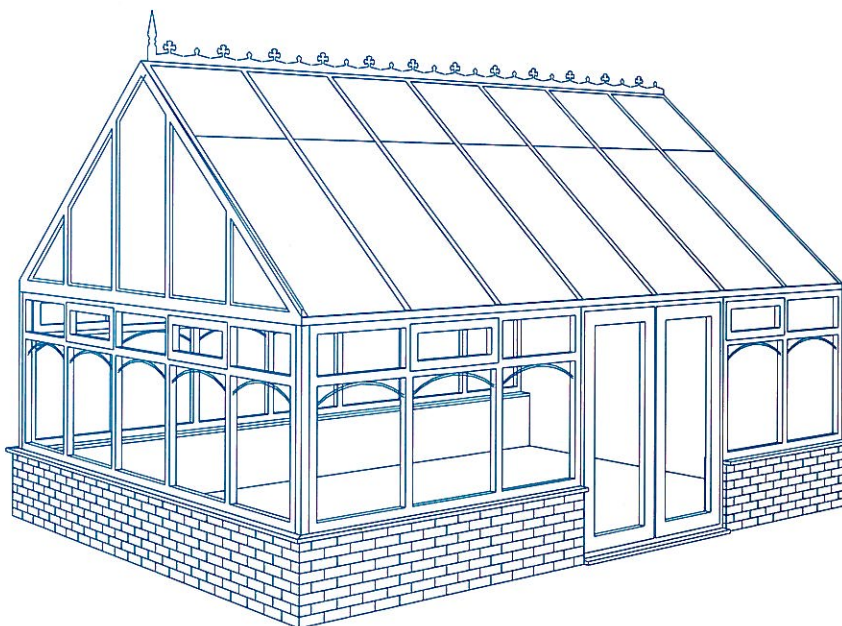

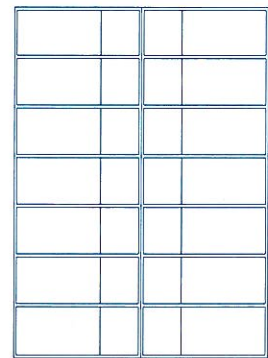

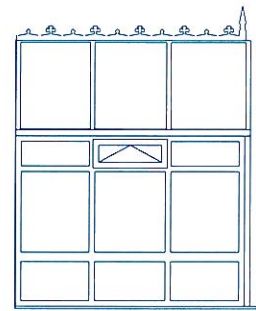

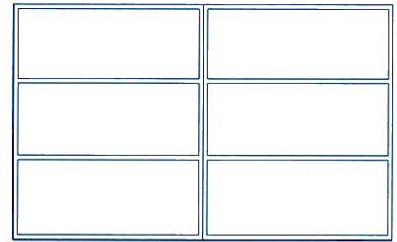

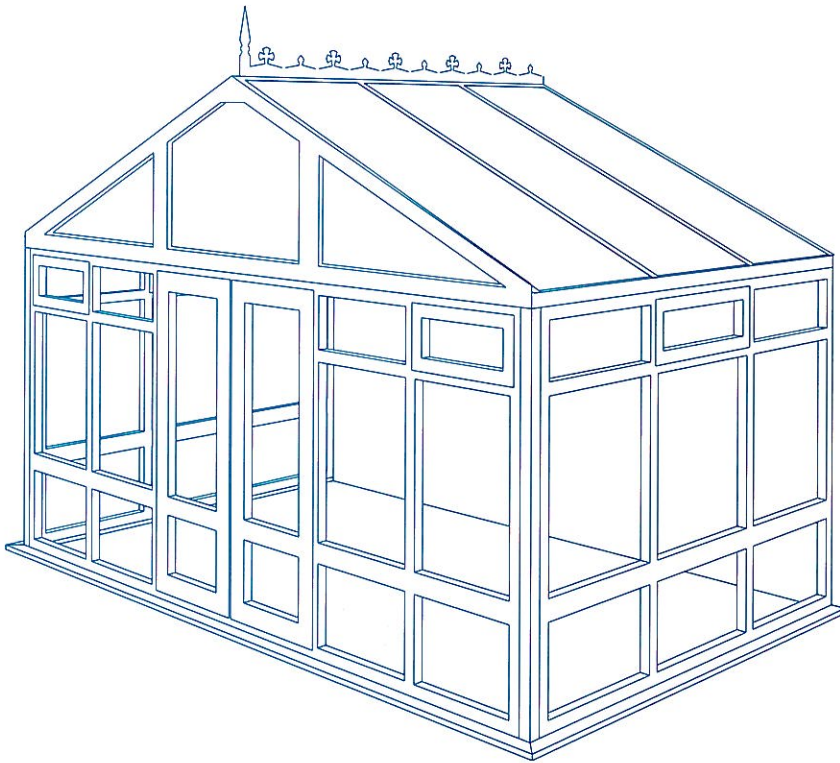

Georgian conservatories offer a clean and simple look with strong bold lines. The hip fronted corners of the Georgian style conservatory give the optimum space for a given plan area and maximise the interior floor space.

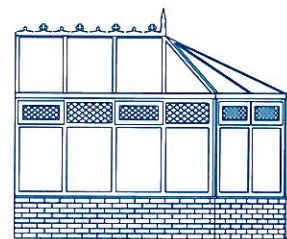

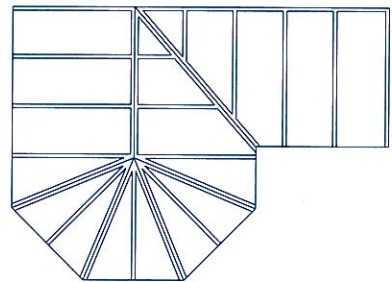

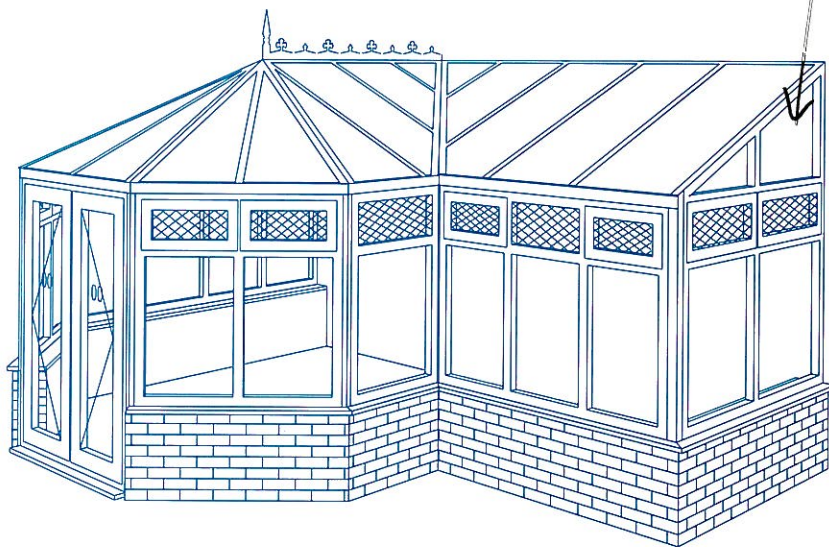

A gable fronted conservatory offers a distinctive and different alternative. When combined with a steeper pitched glass roof, they offer stunning looks that are unsurpassed.

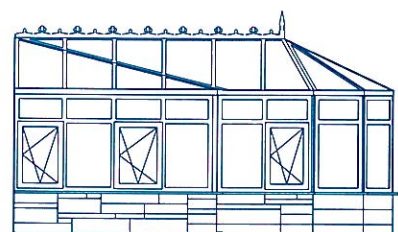

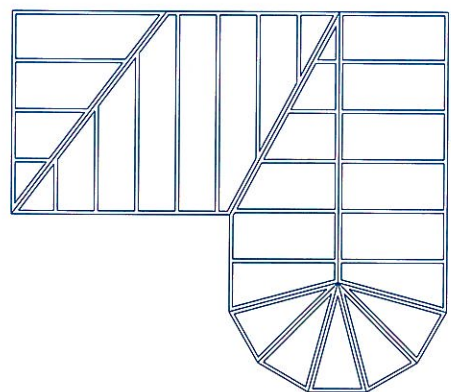

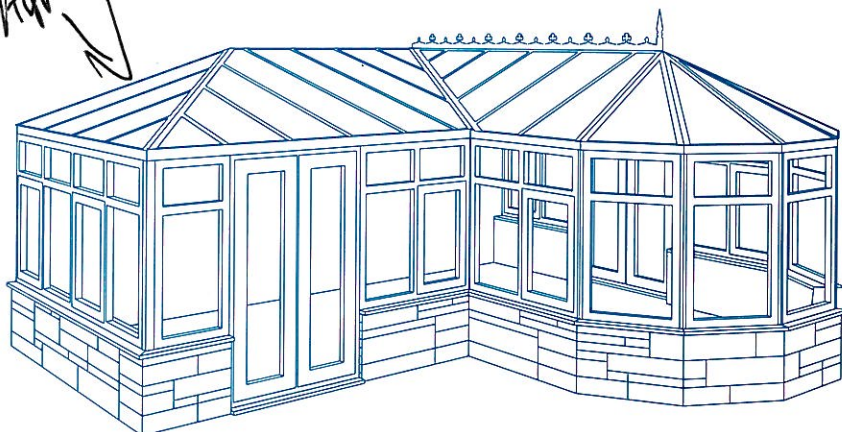

Conservatory Designs 'P' shape

Gable Frame
or Raked Window Square Endwall

Hipped end

Combining a mix of lean-to and Victorian styles, a 'P'-shape conservatory is the ideal choice for the larger conservatory.

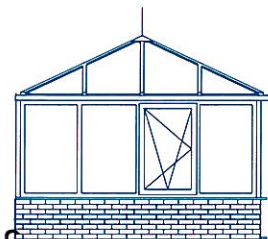

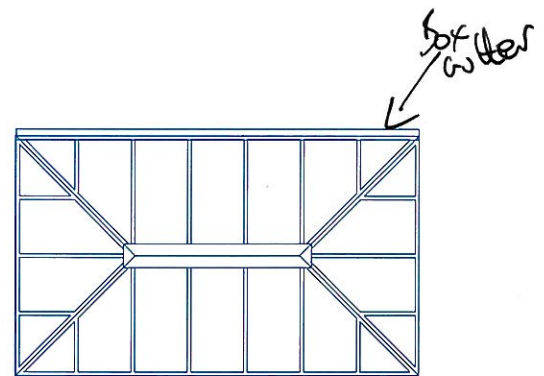

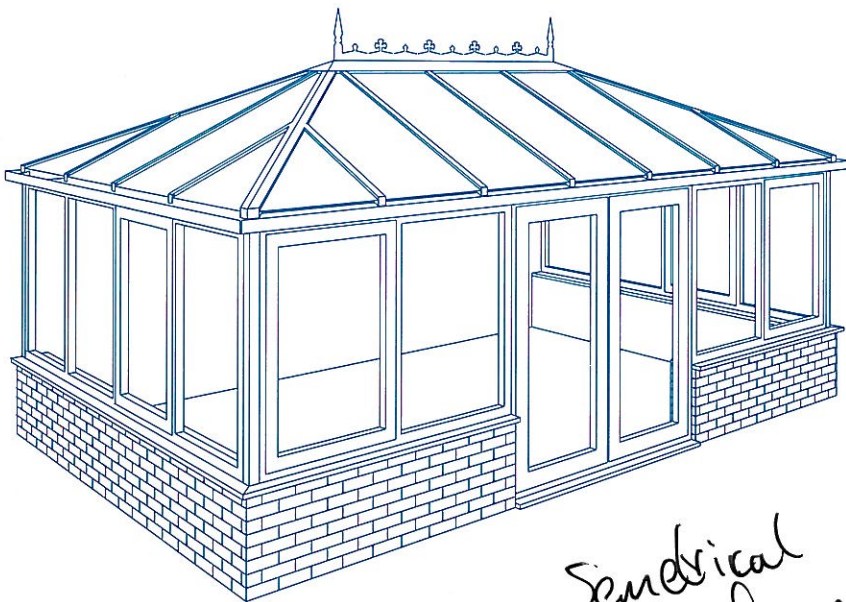

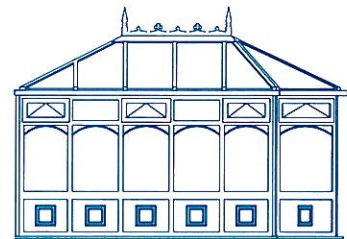

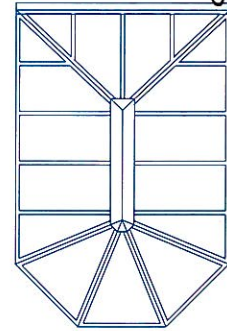

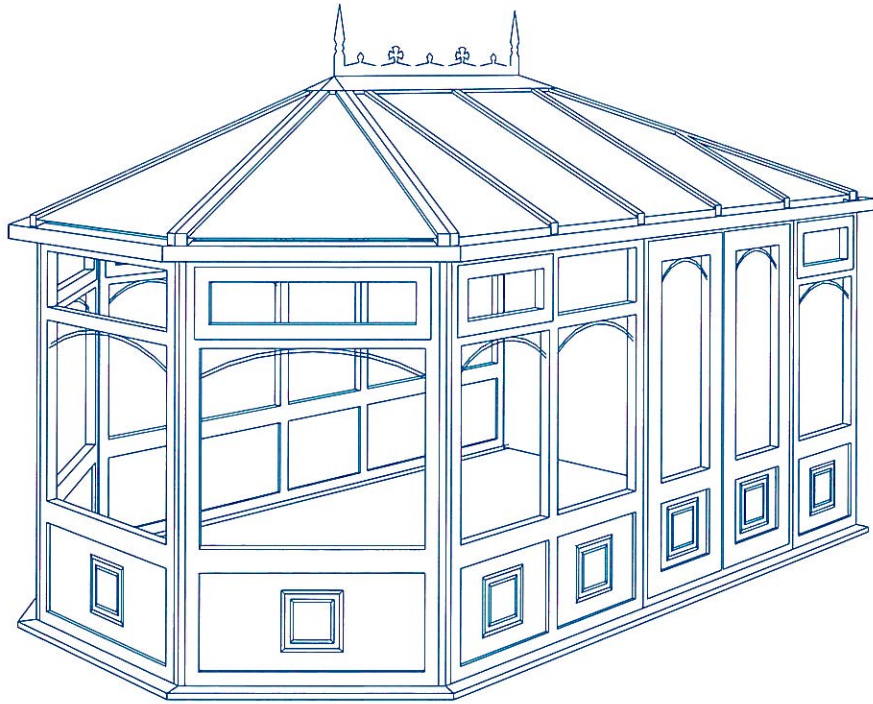

The lean-to section can feature a gable infill frame or can be hipped back.

A 'P'-shape is ideal for creating maximum space whilst maintaining a sense of proportion applicable to the existing dwelling.

Conservatory Designs **Boxgutter situation**

Hipped in each corner

① Ridge parallel to Use

The utilisation of a boxgutter allows the addition of a Victorian style conservatory to an even wider range of dwellings. A boxgutter allows the conservatory to abut the existing dwelling wall or to simultaneously drain the existing house roof and the conservatory roof.

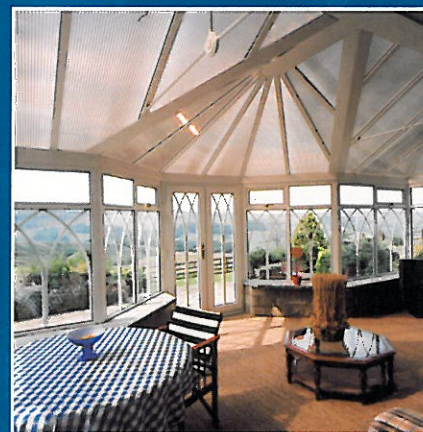

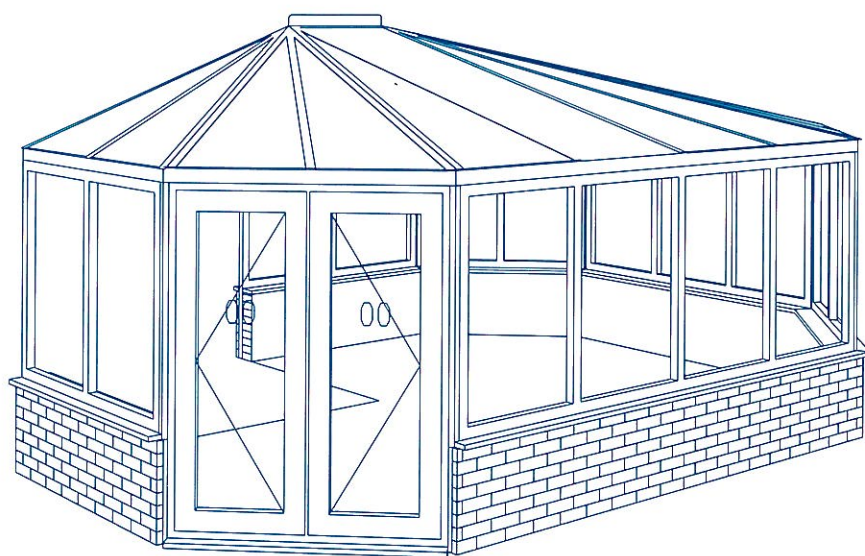

Conservatory Designs 'T'-shape Victorian

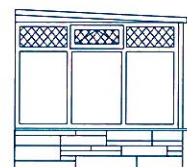

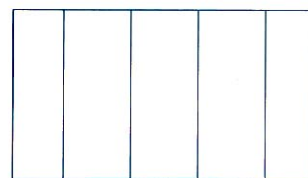

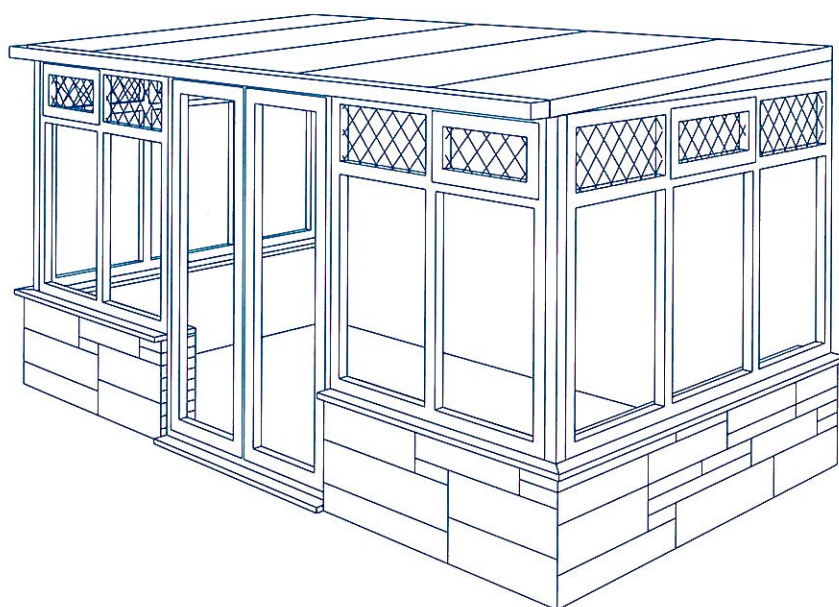

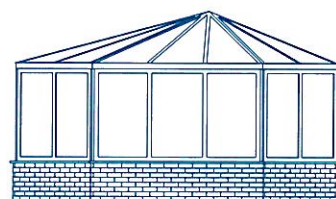

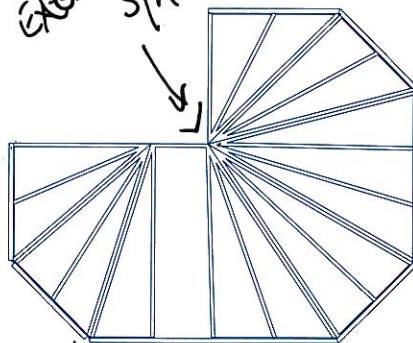

The T-shape Victorian allows maximisation of space and gives an attractive symmetrical appearance. A central projection highlights the shape and creates a 'porch' effect to the conservatory.

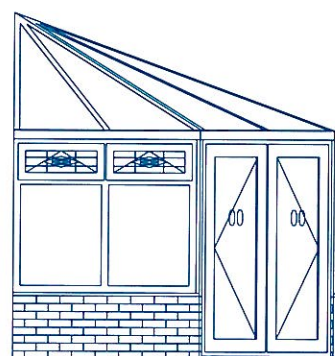

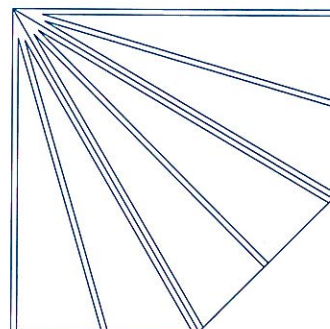

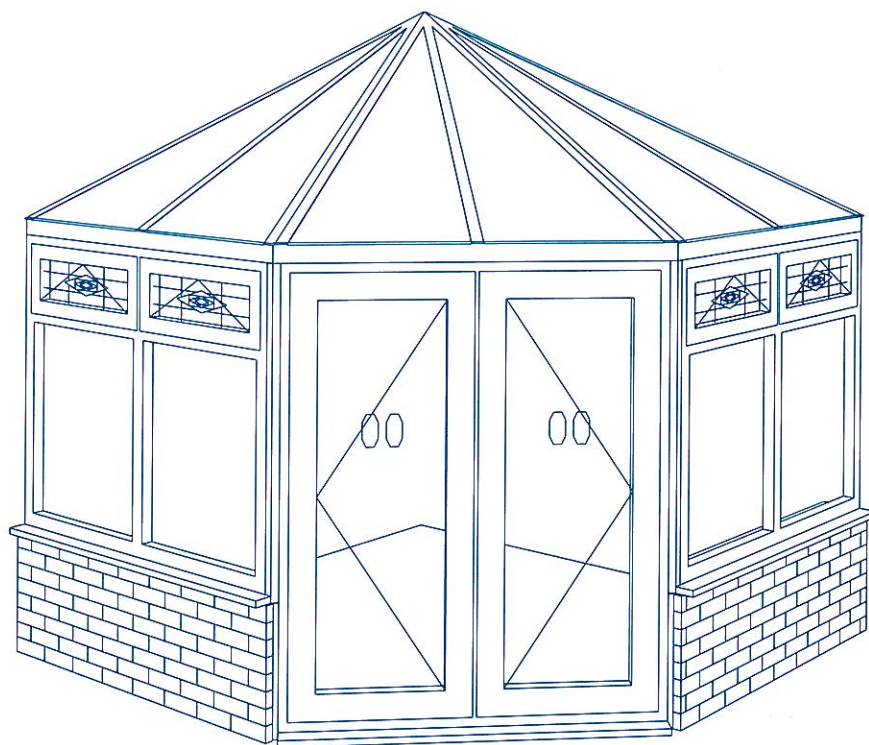

*External 90° Corner
3/4 Work.*

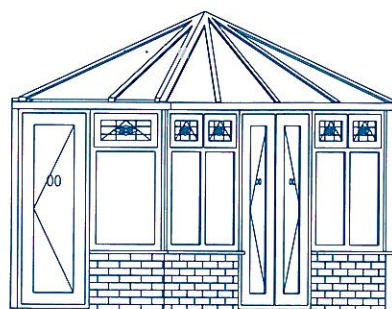

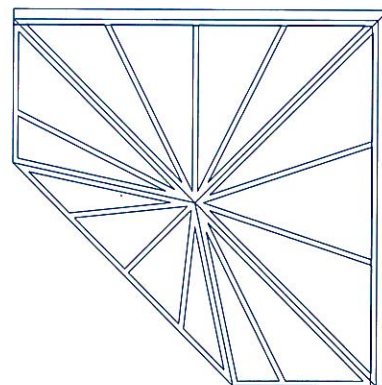

The 'lean-to' conservatory is also known as a sunroom, garden room or mediterranean conservatory. They are particularly suitable for bungalows or houses with height restrictions.

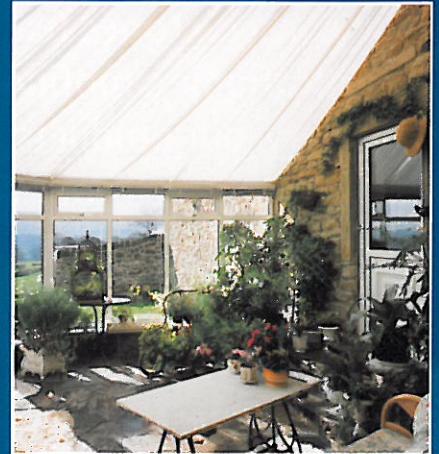

1/4 wok

Full wok

Any quiet unassuming corner can benefit from a beautiful conservatory installation.

These types of conservatory can be very cost effective, as they generally only require two external walls.

Conservatory Designs **Special projects**

The conservatories featured on these final pages illustrate the versatility of Ultraframe's roofing systems. If you would like something out of the ordinary, our products have the capability to turn your dreams into reality - send us your ideas and we will be more than happy to make them work.
