Paravento

Side protection with simple installation

The stylish side awning Paravento protects against inquisitive glances, sunlight and cool side winds. As a cost-effective solution, the lean but robust cassette can be mounted practically anywhere. The Paravento creates attractive highlights in combination with a state-of-the-art pattern from the weinor fabric collection. Special function fabrics provide privacy protection and allow an outside view during the day. Therefore, the Paravento is a flexible and elegant alternative to fixed elements such as fences, walls and hedges.

Product-Highlights

Simple installation – for universal application

The Paravento can easily be fitted to any house wall or patio construction – both sideways or front. It can be mounted simply and quickly due to the corresponding attachments.

Paravento with trapezium shaped fabric

The Paravento with trapezium shaped fabric is the ideal complement to a weinor folding arm awning, for example. As its shape corresponds to the angle of inclination of the awning, it creates a well-protected area with this combination – for additional side protection from inquisitive neighbours, low-lying sun and cool side winds.

For an attractive appearance

When it is retracted, the entire technology is concealed completely in the aluminium cassette of the Paravento.

Product data

max. cassette height	2,5 m
max.projection length	4 m, max. surface area of the fabric 8 m ²
