# More to it – more out of it!

## Plaza Viva with VertiTex II

The new combination of the Plaza Viva pergola and VertiTex II vertical awning gives you clear added value. As now you can offer your customers additional glare, privacy, wind and sun protection – from the front and sides. Two tried and tested weinor products are therefore combined to form a reliable complete system with seamless integration.

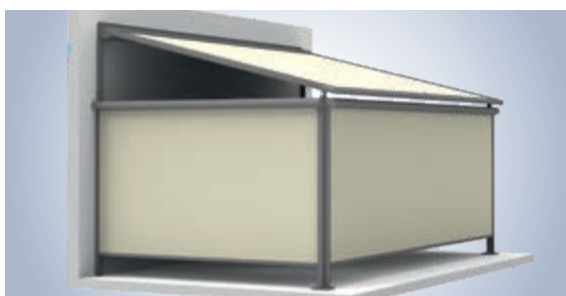

### The product benefits for you

Benefit from the high quality of two perfectly coordinated sun and weather protection solutions during planning and installation.

#### Combination of two tried and tested weinor products

Plaza Viva is the slimline design weather all-rounder, which allows you to enjoy the patio for a long time, VertiTex II shines as a universal vertical awning for elegant privacy and sun protection. With the combination of these two tried and tested highlights you are selling your customers **a complete system with a seamless look.**

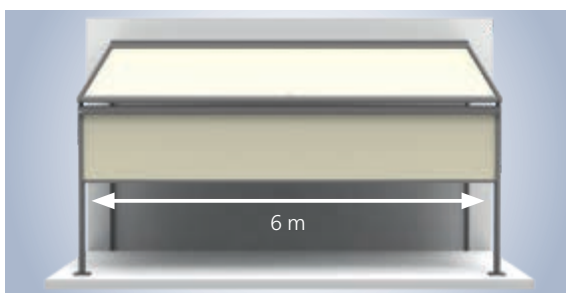

#### Installation made easy: simple mounting

As with all other weinor products, VertiTex II is attached to the Plaza Viva using a locking bar\*. This type of installation is **well-known, safe and easy to carry out.**

#### Large widths possible, multi-section units too

The use of VertiTex II does not restrict the system width. The **maximum width of 6 metres** is also achieved with vertical awnings. Multi-section units are just as feasible in this combination.

**\*Note:** If VertiTex II is only attached at the front, a locking bar is also required at the side for cabling.

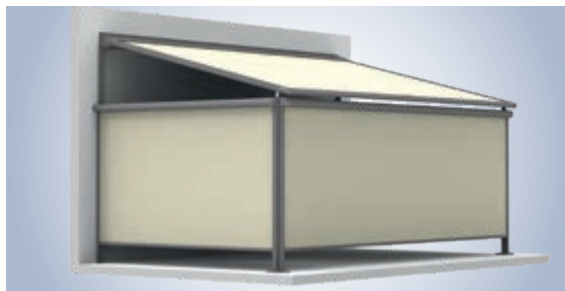

## Your sales advantages

With the combination of Plaza Viva and VertiTex II you have the ideal solution to suit your customers needs.

### Multiple protection – more benefits for your customers

By adding the VertiTex II, your customers enjoy significantly more benefits from the Plaza Viva.

**Glare protection, privacy, wind and sun protection are now possible at the front and sides.** This increases the time users can spend outdoors and enhances their well-being.

### Slimline, unobtrusive, seamless design

Plaza Viva and VertiTex II also visually complement each other perfectly. The vertical awning's **small cassette sizes** (92 and optionally 112 mm) perfectly match the pergola awning's slimline look. VertiTex II is available with both round and square cassette option.

### Two versions each:

#### Plaza Viva: Stretch and OptiStretch

*Stretch:* held captive on 2 sides, no corner reinforcement

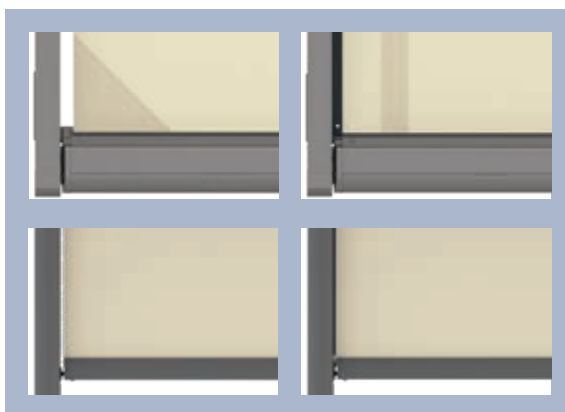

*OptiStretch:* held captive on 4 sides, no light gap, with reinforcement strips

#### VertiTex II: rail and zip

*Rail:* can be used anywhere, with light gap

*Zip:* taut fabric, no light gap

Plaza Viva and VertiTex II are wind resistant up to wind force 5.

**Tip:** The combination of the weinor PergoTex II pergola awning and VertiTex II gives more protection against rainfall and can withstand higher winds.

## Attractive fabrics

## Convenient control

VertiTex II and Plaza Viva can be controlled using radio technology with weinor BiConnect, Somfy io-homecontrol® or by cable.

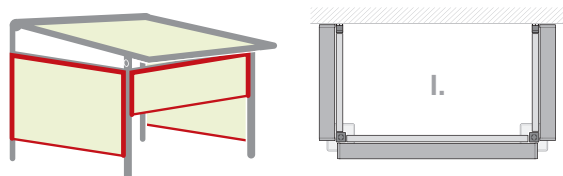

### Technical details:

- When using VertiTex II, Plaza Viva can only be installed with fixed posts (telescopic posts not possible).
- Water drainage/use in any sort of rainfall is only possible when the Plaza Viva is installed on a pitch of 14 degrees or greater.
- It is not possible to retrofit existing systems.

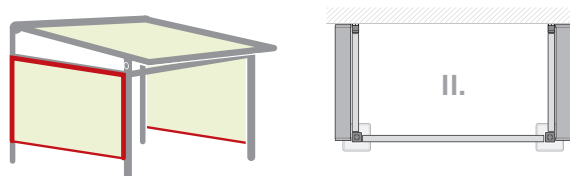

# VertiTex II: versatile installation

When using VertiTex II on Plaza Viva, a wide range of configuration scenarios are available. Virtually all your customers wishes can be fulfilled.
